Appendix J – General characteristics of observational studies on metabolic diseases

Note: Under exposure(s) assessed, all the exposures used as independent variables in relation to the endpoints in the original publications are listed. Among these, the exposures used for this scientific assessment are in **bold** and those not considered for the assessment are *in italics*.

Cohort Country References Funding	Population (original cohort)	Age (years) Gender	Exposure(s) assessed	Exposure assessment, time coverage and validation	Endpoints
AGAHLS Amsterdam Growth and Health Longitudinal Study The Netherlands Stoof et al. (2013) Mixed funding	N = 409 Children from two secondary schools in Amsterdam and the surrounding area Caucasian	13 year (mean) 52.1% females	SSSD, SSFD, SSFJ SSSD, SSFD, TFJ	Cross-check dietary history face-to-face interviews by a dietitian. Subjects were asked to recall the frequency of use and the amount of different foods and beverages during the previous month. No information on validation.	BMI Body fat Trunk fat
ALSPAC Avon Longitudinal Study of Parents and Children UK Johnson et al. (2007) Bigornia et al. (2015) Anderson et al. (2015) Cowin and Emmett (2001) Mixed funding	N = 15,247 General population living within a defined part of the country Caucasian	Birth 58.1% females	Total sugars SSSD, SSFD 100% FJs Carbohydrates Starch Protein Fat Milk Water PUFA SFA Vegetables Individual food items	Three-day food diary covering 2 weekdays and 1 weekend day. Parents recorded their child's diet until the child reached age 10 year. SFFQ were also used at specified examinations, covering 43 items originally and growing to 68 items. FFQs had no portion size information included. No information on validation.	Body weight BMI WC Body fat NAFLD Blood lipids
ALSWH Australian Longitudinal Study on Women's Health Australia Looman et al. (2018) Public funding	N = 40,000 approximately Women from Australia's national health care system Caucasian	18–75 year Females	Total sugars TFJ <i>Carbohydrates</i> <i>LCD score</i> <i>Total dietary fibre</i> <i>Glycaemic index</i> <i>Glycaemic load</i> <i>Individual food groups/</i> <i>items</i>	One self-administered SFFQ of 101 items – previous year. Portion sizes estimated with photo album. Two SFFQ completed but only the one done at baseline used for analysis. Validation for nutrients against 7-day food diaries of 63 women. Correlation coefficient of 0.78 for carbohydrates and 0.73 for total sugars.	GDM

Cohort Country References Funding	Population (original cohort)	Age (years) Gender	Exposure(s) assessed	Exposure assessment, time coverage and validation	Endpoints
Amsterdam The Netherlands Weijs et al. (2011) Public Funding	N = 226 General population Caucasian	4–13 mo 46.7% females	SSSD, SSFD, TFJ Animal protein	Two-day food record (1 weekday and 1 weekend) of actual consumption in portions (translated into weight by standard portion sizes) or weighed. Parents were asked to subtract spilled or not consumed amounts. No information on validation.	Overweight
ARIC Atherosclerosis Risk in Communities Study USA Bomback et al. (2010) Paynter et al. (2006) Public funding	N = 15,792 General population 78.1% White, 21.9% African American	45–64 year 55.2% females	SSSD SSSD, FD and all FJS ASSD Coffee	One interview administered SFFQ of 66 items – previous year. Specified portion sizes (frequency). Two SFFQ completed but only the one done at baseline used for analysis. Validation against four one-week records with a sample of 173 women who answered the 1980 Nurses' Health Study questionnaire. ²³ Sucrose Pearson correlation coefficients (0.71).	Hyperuricaemia T2DM
BMES Blue Mountain Eyes Study Australia Goletzke et al. (2013a) Public funding	N = 3,654 General population Caucasian	67 year (median) 62.7% females	Total sugars <i>Glycaemic index</i> <i>Glycaemic load</i> <i>Starch</i> <i>Fibre</i>	One self-administered SFFQ of 145 items – previous year. Validated against 4-day weighed food records collected on three occasions during 1 year (subsample of the cohort $n = 79$). Correlation coefficient of 0.62 for carbohydrates and for total sugars.	Blood lipids
BWHS Black Women's Health Study USA Boggs et al. (2013)	N = 59,001 African American women	21–69 year Females	SSSD SSFD and SSFJ 100% FJs (orange and grapefruit)	One self-administered SFFQ of 68 items – previous year. Specified portion sizes (frequency).	Obesity T2DM
