Supplementary figure 1. Myelin phagocytosis is most pronounced in Ly-6C<sup>int</sup> macrophages. (A) Oil-Red-O staining of sorted EAE score 4 microglia and Ly-6C<sup>int</sup> and Ly-6C<sup>high</sup> macrophages, 40x magnifications are depicted on the left, scale bar is 25 μm; insets: 100x magnification, scale bar is 12.5 μm. (B) Additional representative images are shown of sorted EAE score 4 microglia, Ly-6C<sup>int</sup> and Ly-6C<sup>high</sup> macrophages at 100x magnification, scale bar is 8 μm.
