NOTES & DISCUSSION

18th Annual Conference on Innovative Design and Technology in Education (IDTE 2020)
NOTE E DISCUSSION

The material presented is about the development, realization, and planning of the Chajang Park Foundation's project in South Korea. It discusses the collaboration between the Korean government and private companies to create a new cultural landscape. The project aims to renovate and revitalize the park, turning it into a center for cultural events and tourism. The text emphasizes the importance of public-private partnerships in urban development.

Chajang Park is located in the heart of Seoul city and has been a significant cultural venue for many years. The foundation has undertaken the renovation project to enhance its facilities and attract more visitors. The project includes the construction of new buildings, green spaces, and infrastructure improvements. The collaboration with private entities ensures the project's financial sustainability and local participation.

The development process involves several stages. First, there is the planning phase, where stakeholders discuss the vision and goals. This is followed by the design phase, where architects and urban planners create detailed plans. Construction begins once the designs are approved, and the final phase focuses on the maintenance and management of the finished park.

The project is expected to have a significant impact on the local economy, attracting tourists and new businesses. It also aims to preserve cultural heritage and provide a space for community engagement and cultural events. The foundation is committed to ensuring that the park remains a vibrant and accessible cultural hub for generations to come.
